

Anti Vibration

EVA™ Pads

EVA™ anti vibration pads are designed to vibrations emanating from appliances such as condensing units and air source heat pumps. This product consists of a polymeric foam core laminated with two-ribbed, 90 degree opposed, rubber sheets.

Features:

- **Safe working load - 3.5 kg per cm.**
- **Special composite foam centre.**
- **Available in five sizes.**

Material Specification:

- **RUBBER** used as the anti-vibration surface on the top / bottom of the pad. This rubber is a styrene butadiene rubber with supportive tensile strength and characteristics suitable for the application.
- **EVA** used as the core vibration dampening material. This EVA material is a polymeric foam material. It is constructed out of a blend of ethyl vinyl acetate and other enhancements.
